

### **PDS / PDMS Modeling Service :**

For instrument hookup lines it is a good idea to do the engineering during design stage itself for the reasons explained below. This is especially valid for prefabricated Hookups. This can be added in the PDS/PDMS models being done by the engineering contractors.

1. Obviates all possible errors in the selection of right kind of Hookups.
2. Drawings/ models can be checked for interference with other structures, equipment, piping etc..
3. Hindrance for man / material movements in pathways etc.. can be checked and avoided
4. Precise bill of materials for ordering can be obtained

We have the capacity and experience in developing / inserting these in PDMS/PDS models.
